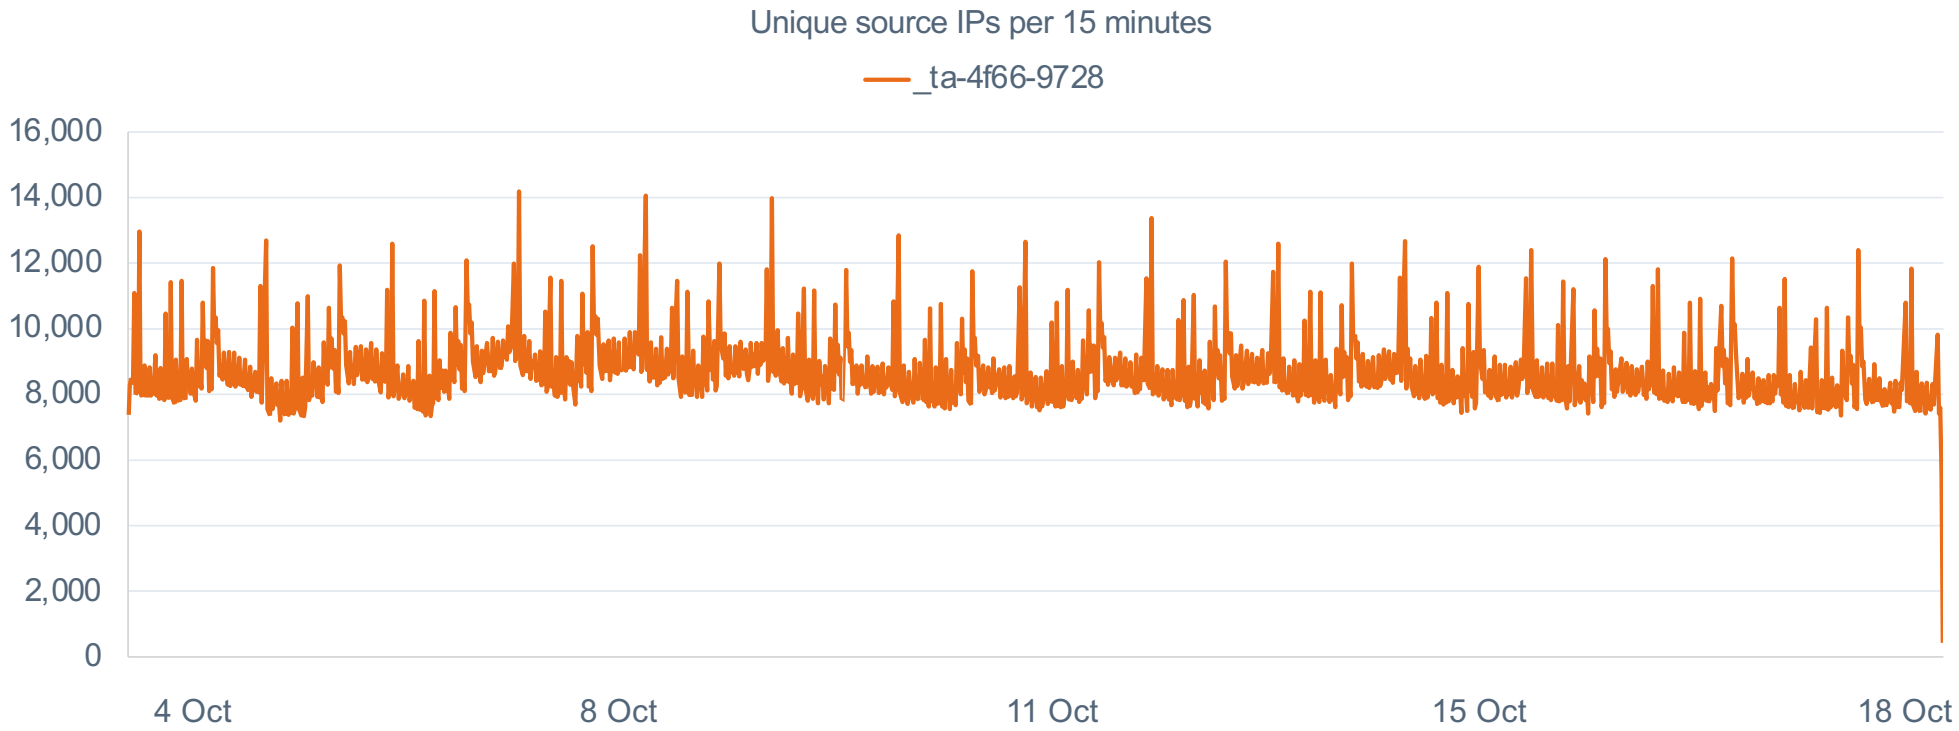
# RFC8145 observations during the KSK roll

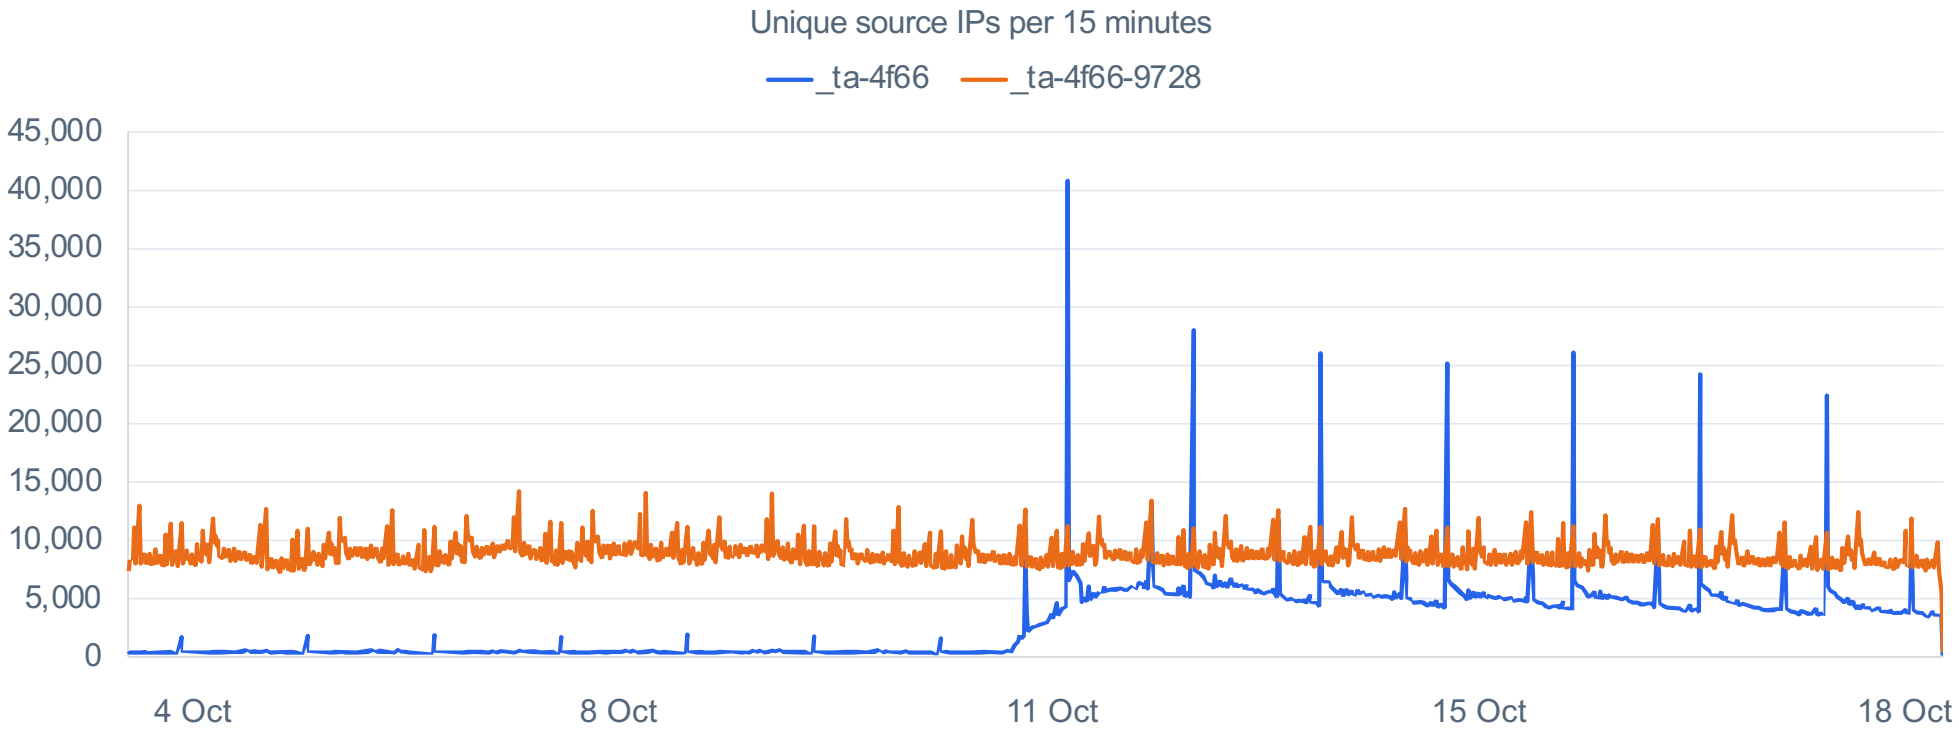
New and old KSK. Distinct source IPs per signal, per 15-minute interval · 4–18 October · UTC



Source addresses, not volume of queries. Note that nothing distinct is happening on the 11th of October.

# RFC8145 observations during the KSK roll

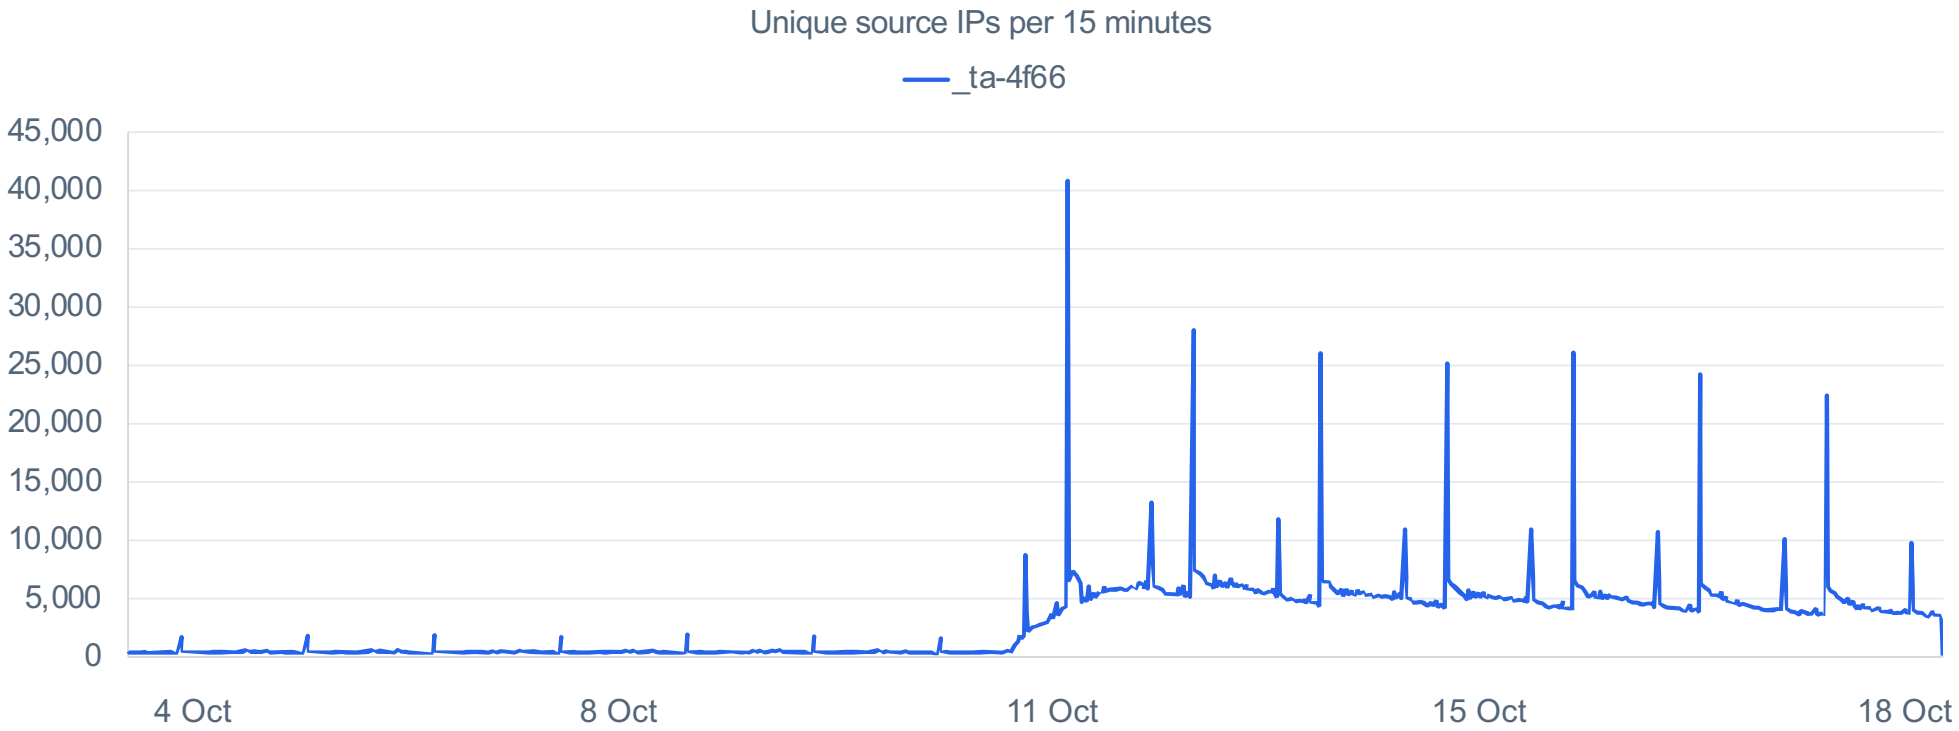
Old KSK only. Distinct source IPs per signal, per 15-minute interval · 4–18 October · UTC



October 11 change in the KSK2017 trust anchor signaling pattern

# RFC8145 observations during the KSK roll

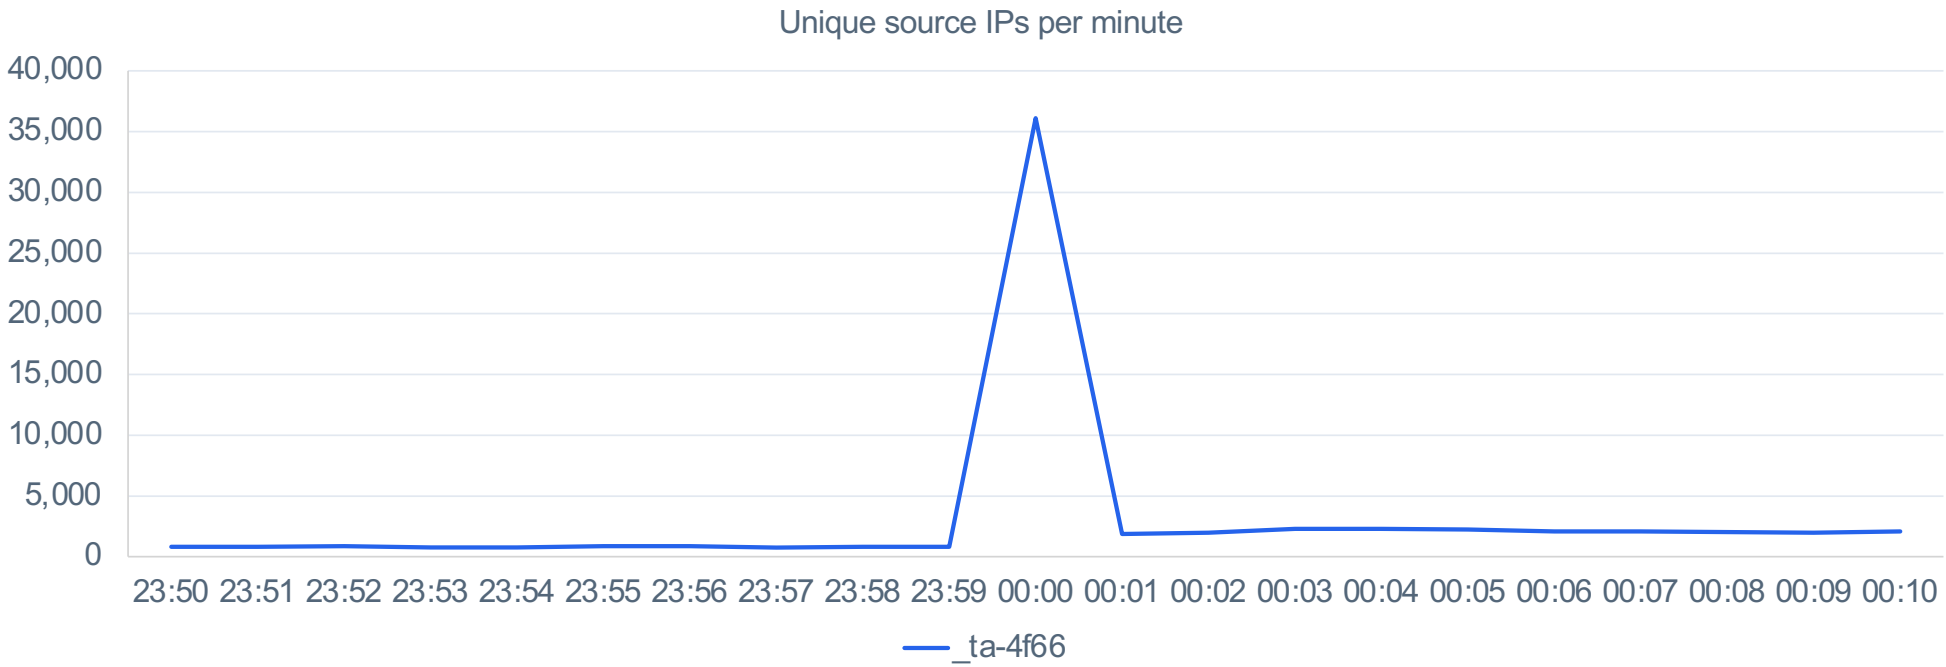
Distinct source IPs per signal, per 15-minute interval · 4–18 October · UTC



October 11 change in the KSK2017 trust anchor signaling pattern

# 36,101 sources in the first minute

12 October 2026 · _ta-4f66 · 00:00:00–00:00:59 UTC



**At 00:00 UTC: 36,101 queries within the first minute (73% was in the first 5 seconds)**

# Currently no idea why, all ideas welcome

Cronjob? ”midnight peaks” should occur before the 11th of october.

Note that sources are not necessarilly validating.
