

Root Zone KSK: The Road Ahead

Edward Lewis | DNS-OARC & RIPE DNSWG | May 2015
edward.lewis@icann.org

Agenda

- ⦿ Setting the scene
- ⦿ Change of Hardware Security Modules (HSMs)
- ⦿ Roll (change) the Key Signing Key (KSK)
- ⦿ The big finish

Background

- ⦿ Root Zone KSK
 - ⦿ The trust anchor in the DNSSEC hierarchy
 - ⦿ Has been in operation since June 2010
 - ⦿ With no roll of key itself
 - ⦿ And with no change of HSM (until April 2015)
- ⦿ "After 5 years of operation"
 - ⦿ Concerns over HSM (hardware) battery life
 - ⦿ Requirement to roll the KSK

The Players

- ⦿ Root Zone Management Partners
 - ⦿ Internet Corporation for Assigned Names and Numbers (ICANN)
 - ⦿ U.S. Department of Commerce, National Telecommunications and Information Administration (NTIA)
 - ⦿ Verisign
- ⦿ External Design Team for KSK roll
- ⦿ ICANN
 - ⦿ Performs DNSSEC and KSK functions (plus others) in accordance with the IANA functions contract

What is a...

⦿ KSK

- ⦿ Key-Signing Key signs DNSKEY RR set
- ⦿ Root Zone KSK
 - ⦿ Public key in DNS Validator Trust Anchor sets
 - ⦿ Copied everywhere - "configuration data"
 - ⦿ Private key used only inside HSM

⦿ HSM

- ⦿ Hardware Security Module
- ⦿ Specialized hardware
- ⦿ Operates KSK
 - ⦿ Prevents exposure of private key

Public Impact

- ⦿ HSM change
 - ⦿ Not much impact to the public
 - ⦿ So long as they work, they are unseen
 - ⦿ Concerns that existing set is growing old
 - ⦿ Specifically the internal battery
- ⦿ KSK roll
 - ⦿ Large impact (on those validating)
 - ⦿ Anybody operating a validator has it now
 - ⦿ All copies need to be updated
 - ⦿ Trusting the new KSK is work to be done

Goal for today

- ⦿ This presentation is intended to
 - ⦿ Inform
 - ⦿ Stir reaction and feedback
 - ⦿ Call attention to a coming ICANN Public Comment Period on KSK roll
- ⦿ Two means for feedback
 - ⦿ Informal via mic and mail list, comments picked up by KSK roll Design Team
 - ⦿ Formal via an upcoming ICANN Public Comment period (to be announced)

HSM Change (or "Tech Refresh")

- ⦿ Straightforward Replacement
 - ⦿ Same brand, newer model
- ⦿ Culpeper, Virginia, USA Facility
 - ⦿ Ceremony XXI on April 9, 2015 (went flawlessly)
- ⦿ El Segundo, California, USA Facility
 - ⦿ Ceremony XXII planned for August 13, 2015
- ⦿ Documented Plan
 - ⦿ <https://www.icann.org/news/announcement-3-2015-03-23-en>

KSK Roll

- ⦿ Compared to HSM change
 - ⦿ Greater public impact
 - ⦿ Various options to consider
- ⦿ Approach
 - ⦿ ICANN Public Consultation (2012)
 - ⦿ Previous engineering effort (2013)
 - ⦿ Current external design team (2015)

Milestones

- ⦿ Current Design Team Plan
 - ⦿ Study, discussion until June
 - ⦿ Present report for ICANN Public Comment
 - ⦿ One month, covering ICANN 53
 - ⦿ One month to prepare final report
- ⦿ Root Zone Management Partners then develop a plan and execute

Design Team Roster

- ◉ Joe Abley
- ◉ John Dickinson
- ◉ Ondrej Sury
- ◉ Yoshiro Yoneya
- ◉ Jaap Akkerhuis
- ◉ Geoff Huston
- ◉ Paul Wouters
- ◉ Plus participation of the aforementioned Root Zone Management Partners

In theory

- ⦿ On paper...
- ⦿ The industry collective wisdom is fairly mature
 - ⦿ There have been many KSK rolls before
 - ⦿ What works, breaks has been experienced
- ⦿ But the Root Zone KSK is different
 - ⦿ Other KSK rolls inform the parent (or DLV)
 - ⦿ A new root KSK has to be updated everywhere
 - ⦿ Mitigated by RFC5011's trust anchor management

In practice

- ⦿ ...but...
- ⦿ Any plan will face external challenges
 - ⦿ Will validators have trouble receiving responses during the roll? (Fragmentation issues)
 - ⦿ Are automated trust anchor updates implemented correctly?
 - ⦿ Will operators know how to prepare, how to react?
 - ⦿ Will all DNSSEC code paths perform correctly?

A Discussion with the Design Team

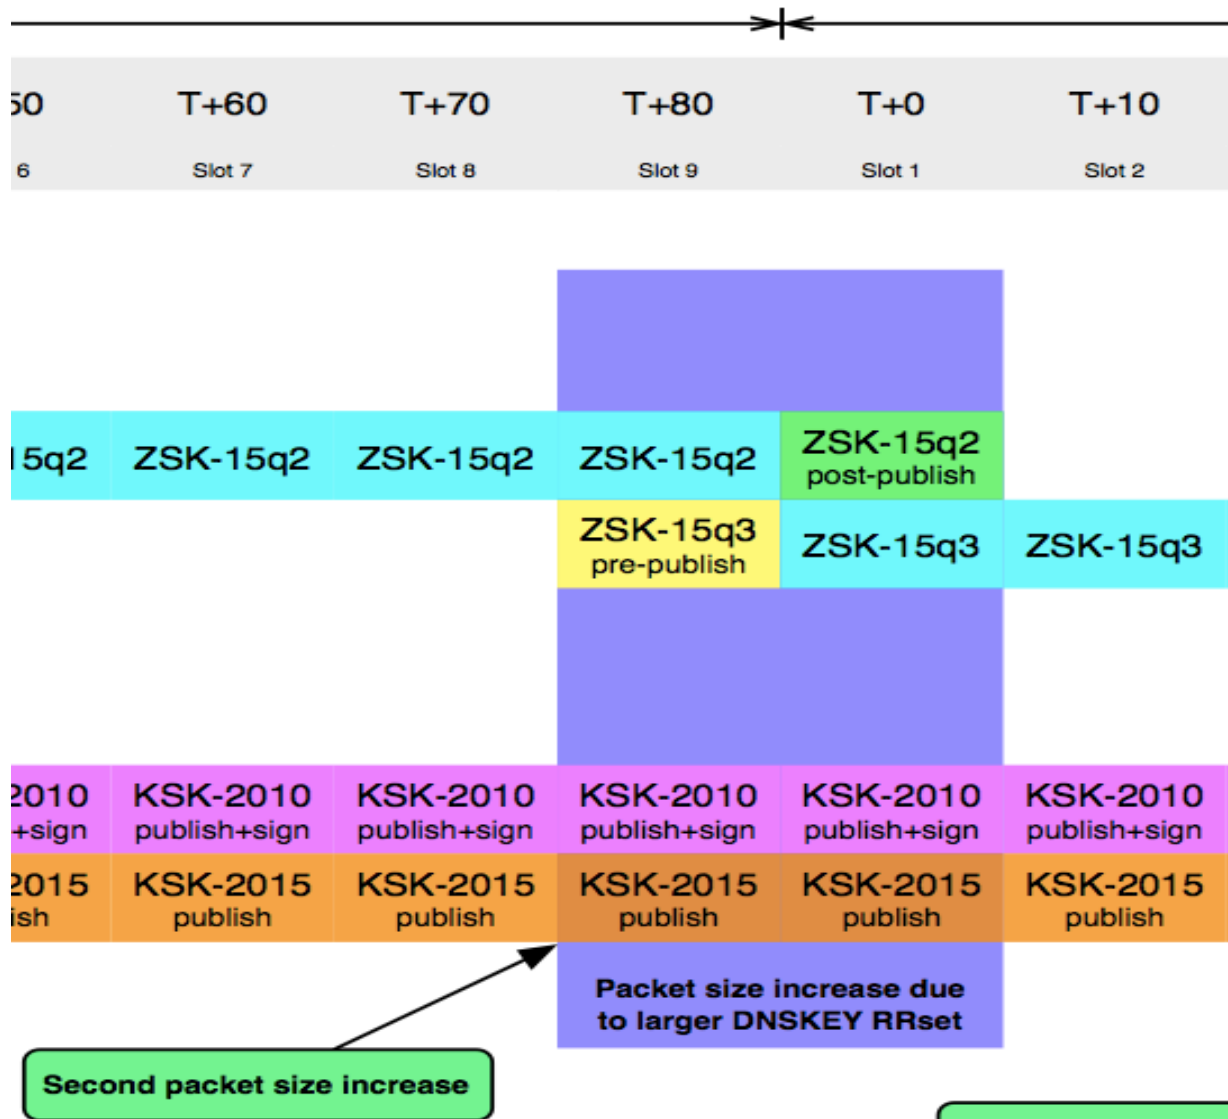

- ⦿ This presentation is to inform and invite participation
- ⦿ Concerns of the design team
 - ⦿ MTU, IPv4 and IPv6 fragment handling
 - ⦿ Alternate algorithm to RSA-SHA256
 - ⦿ RFC 5011 and Trust Anchor maintenance
- ⦿ So, now, with members of the design team
 - ⦿ What concerns do you have?
 - ⦿ What comments do you want to add?

Potential Step 1 – Pre-publish new KSK (2015)

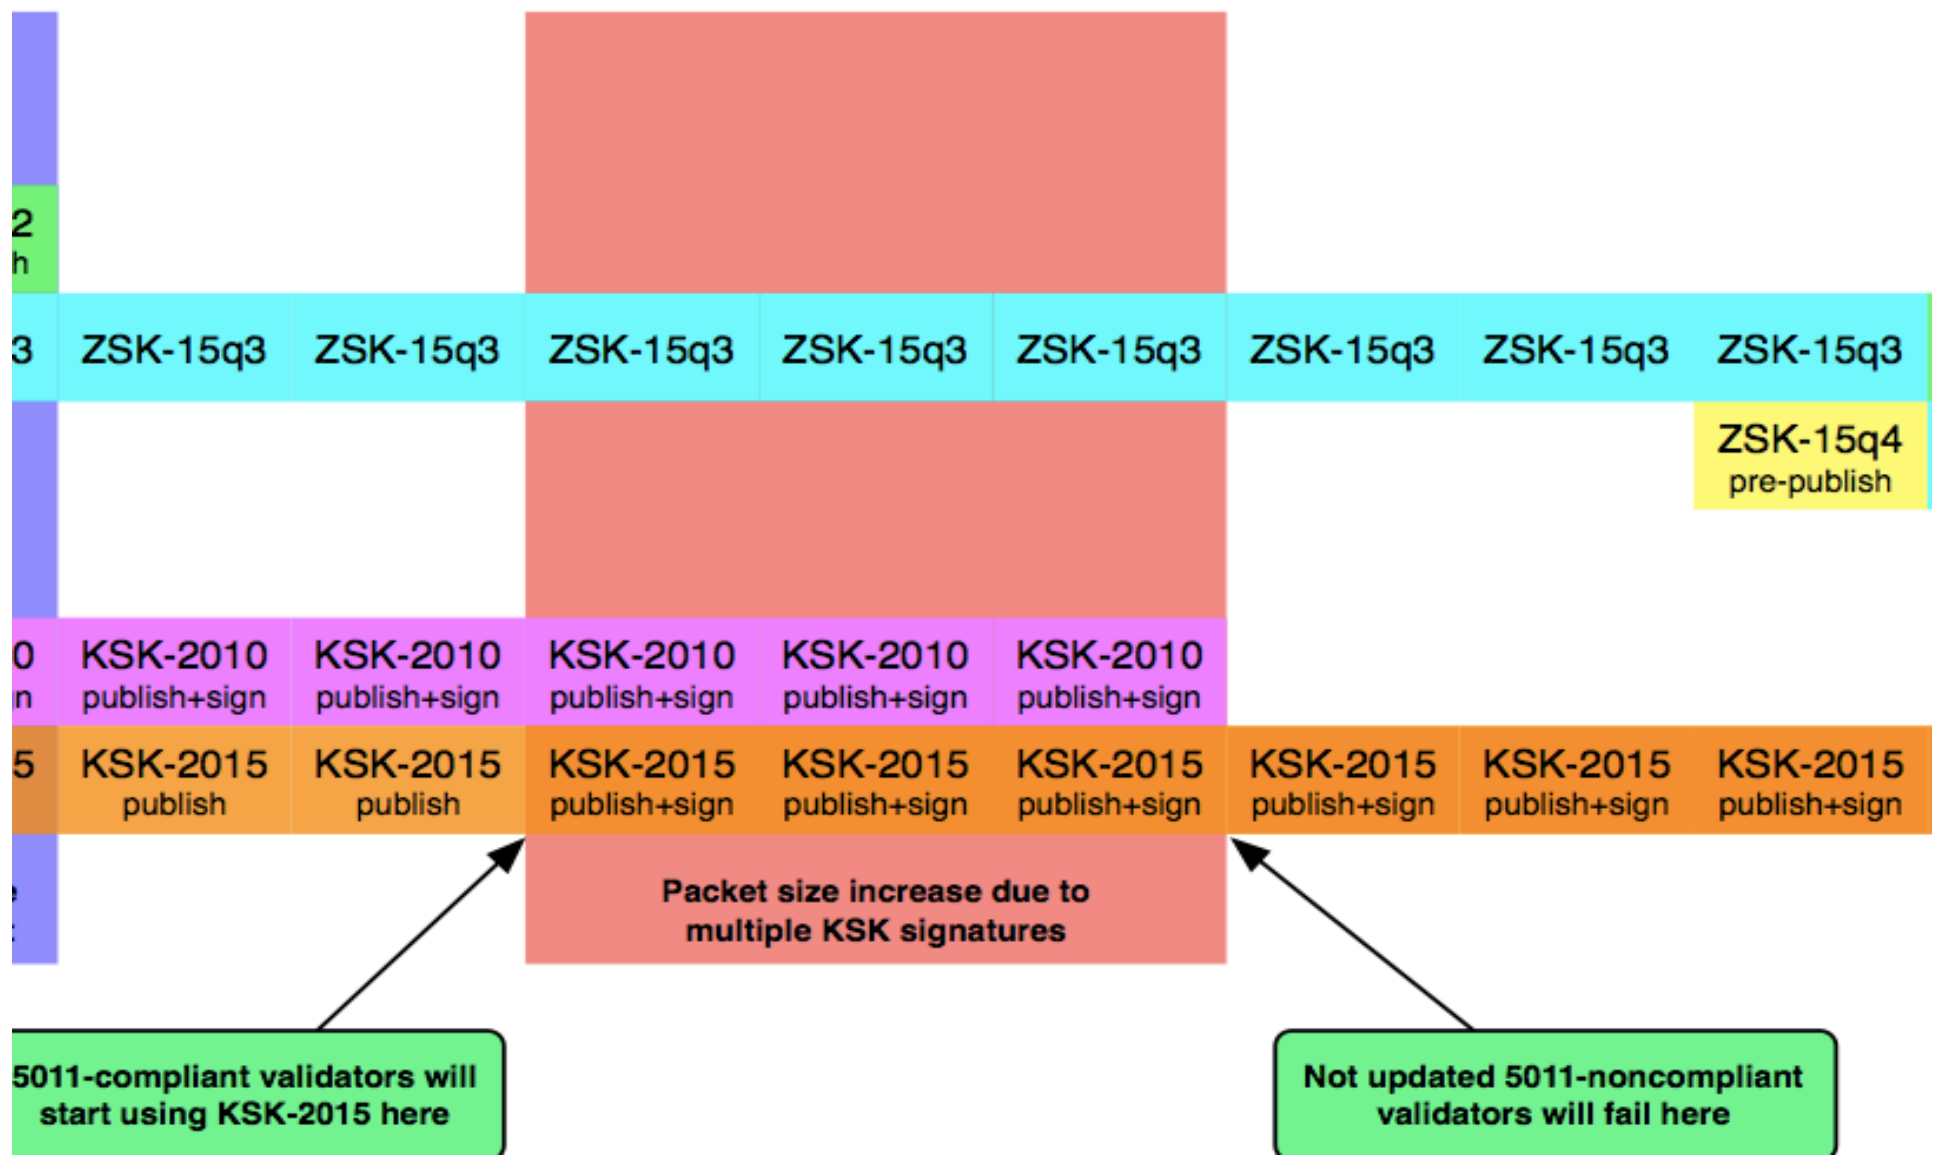

First packet size increase

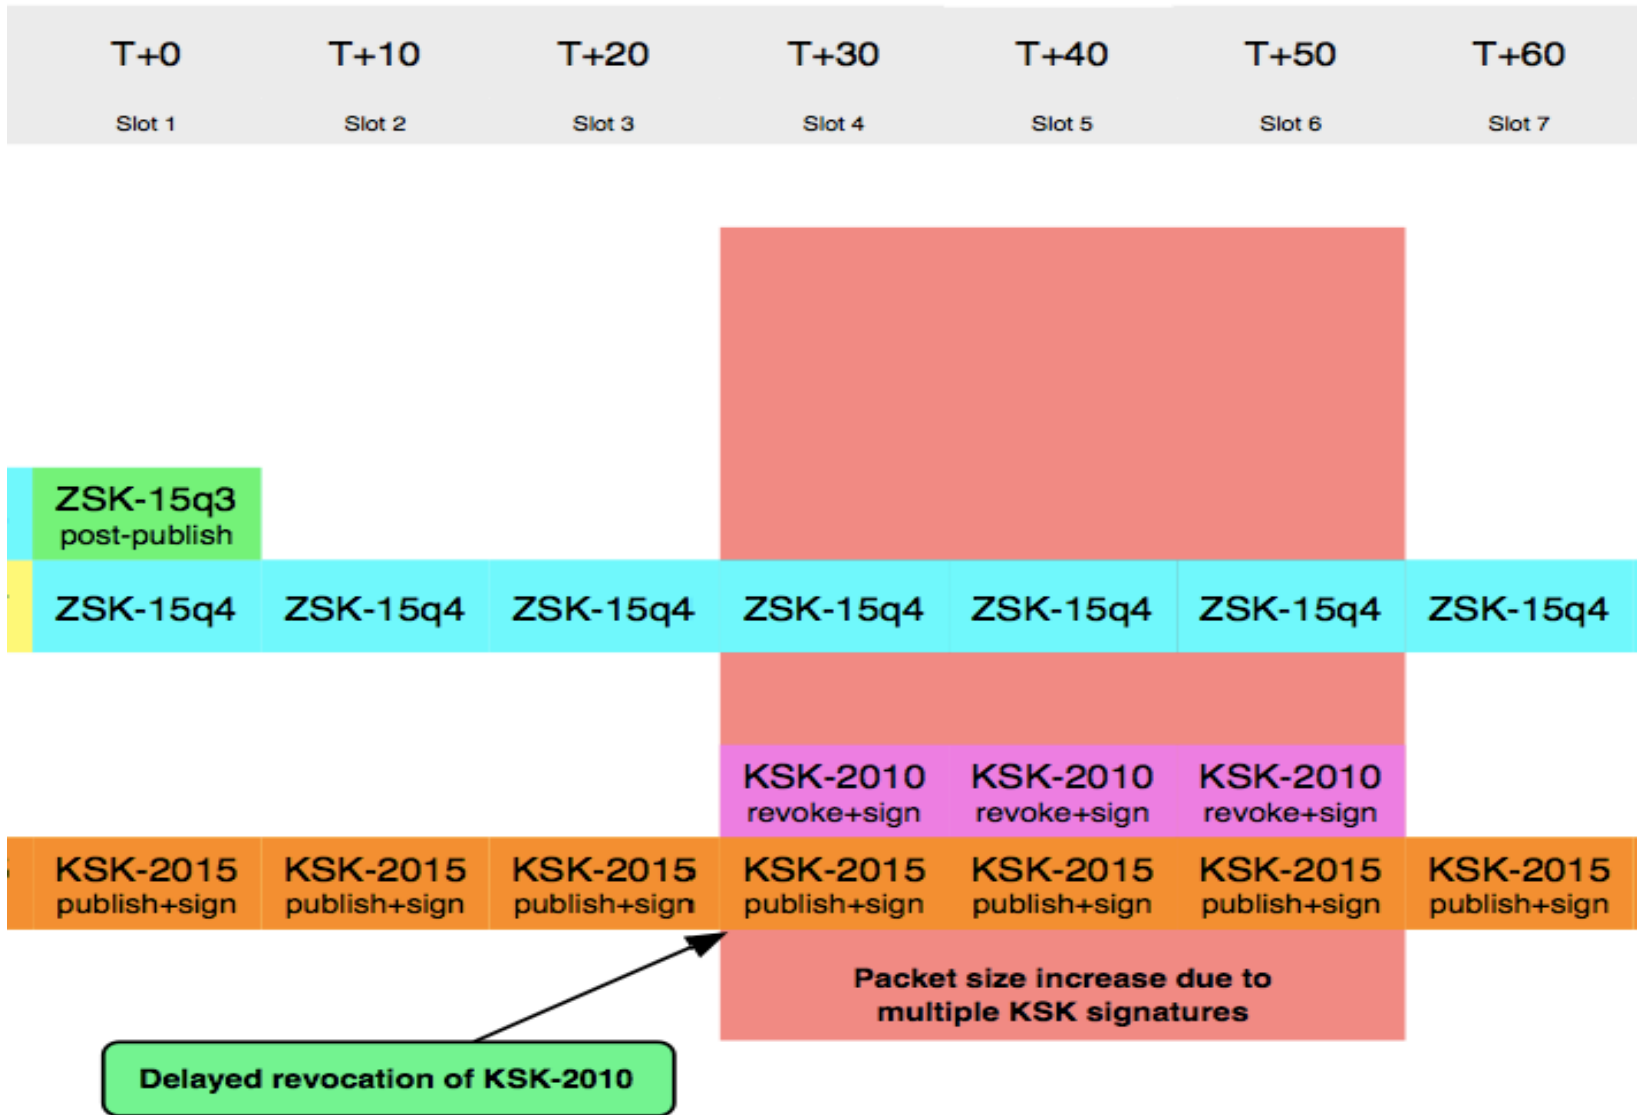

Potential Step 2 – Regular ZSK Roll

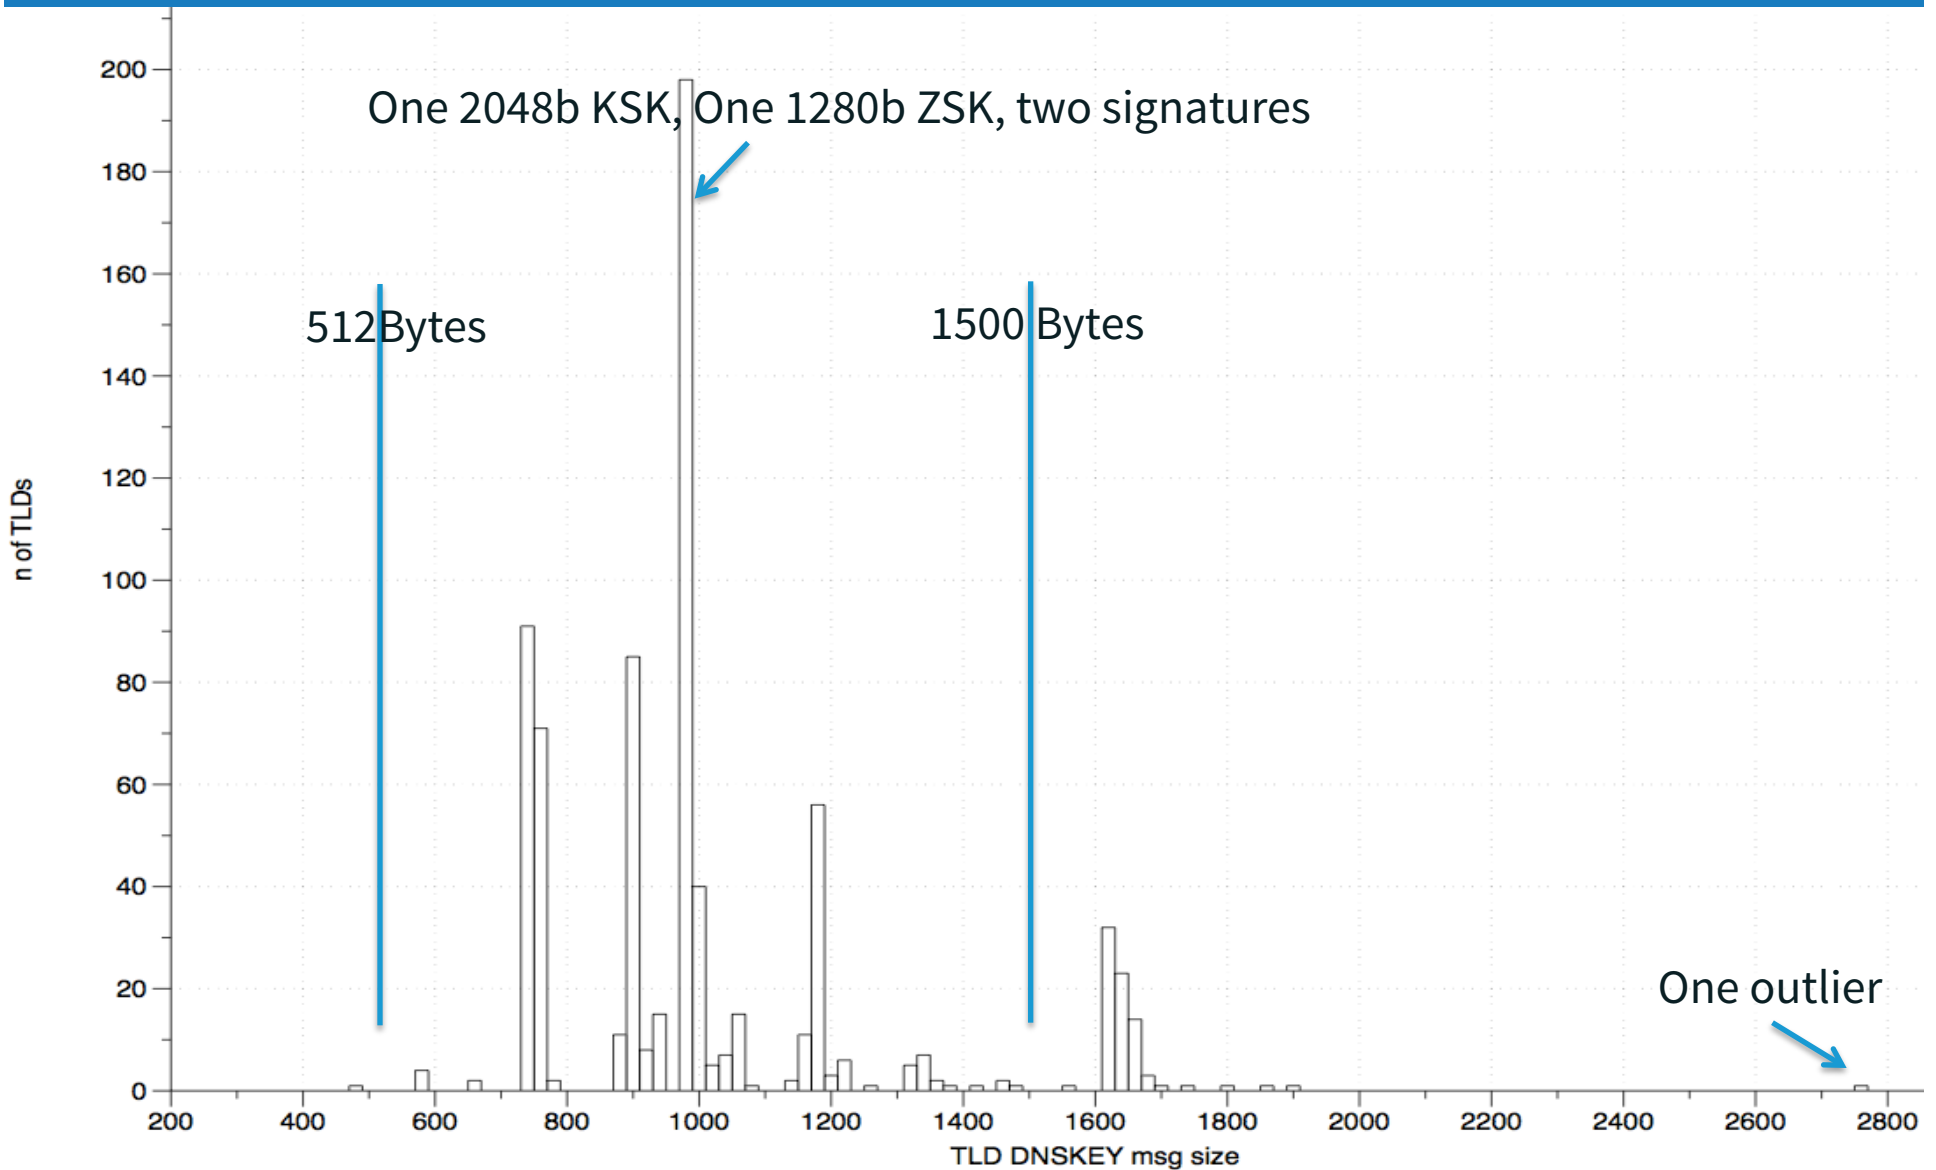

Potential Step 3 – Removal of old KSK (2010)

Potential Step 4 – Revoke 2010 after ZSK roll

Recently Measured DNSKEY Response Sizes (TLD)
