Reporting Responsibility

Edward Lewis

DNS-OARC

30 September 2017

A researcher walks into a ...

◉ As part of our daily lives, we collect data

◉ We sometimes see "broken-ness"

◉ How do we respond?

  ◉ Make every effort to let them know?

  ◉ Ignore the problem, perhaps becoming liable for not warning?

  ◉ Cease collecting data to avoid this dilemma?

Is There Room Here For Work?

- A person-to-person network to help reach impacted parties?

- A framework for describing experiments, why the situation has been noticed, what is "expected data"?

- Awareness of difference between Service-Level Agreement enforcement vs. "friendly hints"?

- Should DNS-OARC ("*R is for Research*") develop something in this space (statements/clearinghouse/"rolo-dex")?
