What we did last OARC

DNS-OARC regularly co-locates its Domain Name Systems Operations Workshops with RIPE, and is doing so again jointly with CENTR-Tech in Amsterdam immediately before RIPE77. OARC seeks to bridge the DNS clue gap through knowledge sharing, data gathering/analysis, community building, and outreach.

This talk will give an introduction and summary for the wider RIPE audience of the latest DNS material freshly presented at OARC29, and will include a pick of the best new DNS technology deployment experiences, best practices, data, and analysis, with pointers to sources of further information.

Summary

Talk Duration

Presenter(s) : Mr. MITCHELL, Keith (DNS-OARC)

Session Classification : RIPE77 DNS WG
