DNS Flag Day 2020
2019-10-31 DNS-OARC, Austin, TX
Ondřej Surý <ondrej@isc.org>
2020: Motivation

- IP fragmentation often does not work
- IP Fragmentation Considered Fragile [I-D] (expired)
- IPv6, Large UDP Packets and the DNS (by Geoff Huston)
- If IP fragmentation works, it is not secure enough
  - Measures against cache poisoning attacks using IP fragmentation in DNS (by Kazunori Fujiwara)
UDP is unsuitable for large DNS messages
Causing operational issues around the globe
2020: Goals

- Eliminate operational issues caused by fragments
- Improve security of DNS
2020: Eliminating Fragments

- For large DNS answers switch to TCP
  - **No change for small answers - UDP**
- Existing standards
  - DNS Transport over TCP in RFC 7766 and predecessors
  - Default EDNS buffer size **1232** (= never fragment)
- Non-compliance on several levels
  - Authoritative servers don’t listen on TCP
  - Authoritative server don’t honor EDNS buffer size
  - Recursive clients (ignores TC=1)
2020: Advantages of TCP

- Hides IP fragmentation issues
- Harder to spoof
  - Low-throughput high-value services
    - CA domain validation
    - DNSSEC bootstrapping (CDS/CDNSKEY)
- Preparation for DNS-over-TLS (and DoH)
2020: Authoritative nameserver operators

- Honor RFC 7766 — DNS Transport over TCP
  - Answer on TCP port 53
  - Check your firewall, too!
- Set the maximum EDNS buffer size 1232 to avoid fragmentation
  - Defaults in software will reflect this
- Authoritative MUST NOT send oversized answers
  - Standard compliant software does not require changes
2020: Recursive nameserver operators

- Honor RFC 7766 — DNS Transport over TCP
  - Answer on TCP port 53
  - Check your firewall, too!
- Set the default EDNS buffer size 1232 to avoid fragmentation
  - Defaults in software will reflect this
- Resolvers MUST support fallback from UDP to TCP
  - Standard compliant software does not require changes
2020: Test Resolver Configuration

• BIND 9
  • options { edns-udp-size 1232; };

• Knot Resolver
  • net.bufsize(1232)

• PowerDNS Recursor
  • edns-outgoing-bufsize=1232

• Unbound
  • server:
    edns-buffer-size: 1232
2020: The Missing Pieces

- Exact date
- 1 year from now?
- More measurements
- Communication
2020: Supporters
